What is required?

Recharge API - is required to take the recharge from different mobile, DTH operators. You will keep a balance with API which will get deducted with each recharge taken from your website.

Payment Gateway - Your website users can pay you using a secure Payment Gateway by credit card, debit card and internet banking.

Recharge Software - This will make the process of recharging devices easier and faster for your website users. They will just put in their device number, amount to recharge, choose operator and it will recharge user device in a fly.

Responsive User Interface - Keeping in mind of increasing use of smart phones we have come up to provide an interface which will get itself arranged on the basis of where your website is seen. It will automatically convert itself on Laptop, Mobile, Tablet etc.

Website owner control panel - Our easy to use and well designed control panel makes it easy for you to keep control of your website, check status of Sales, failed recharges, refund, e-wallet and manage almost each and everything on your website.
